Company History

Legend Elevators manufactures a wide range of elevator solutions for residential, commercial, industrial, and hospital applications. Designed for Indian conditions, our elevators deliver reliable performance even in harsh climates and fluctuating power supply environments.

With a strong focus on safety, comfort, speed, and energy efficiency, we combine modern technology, premium-quality materials, and experienced manpower to provide durable and high-performing elevators backed by excellent after-sales service.

From low-rise buildings to specialized passenger transportation systems, we offer machine room and machine room-less elevator solutions designed for maximum space efficiency and smooth operation. We also provide customized repair and modernization services to enhance elevator performance without the cost of complete replacement.

At Legend Elevators, service excellence is not just a commitment - it is the way we do business.

MRL

» MRL Elevator Machine Roomless Elevator

MRL (Machine Room Less) Elevators are primary selections for projects with limited space or design that does not allow machine room construction. In addition, MRL elevators are ideal for medium-long travel with a consequential degree of reduction of energy and at the same time no extra space is required for the engine room.

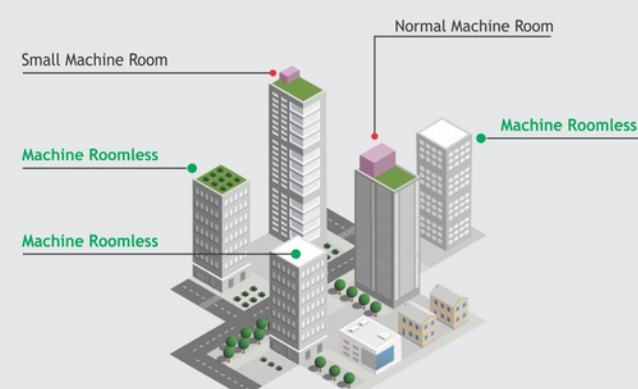

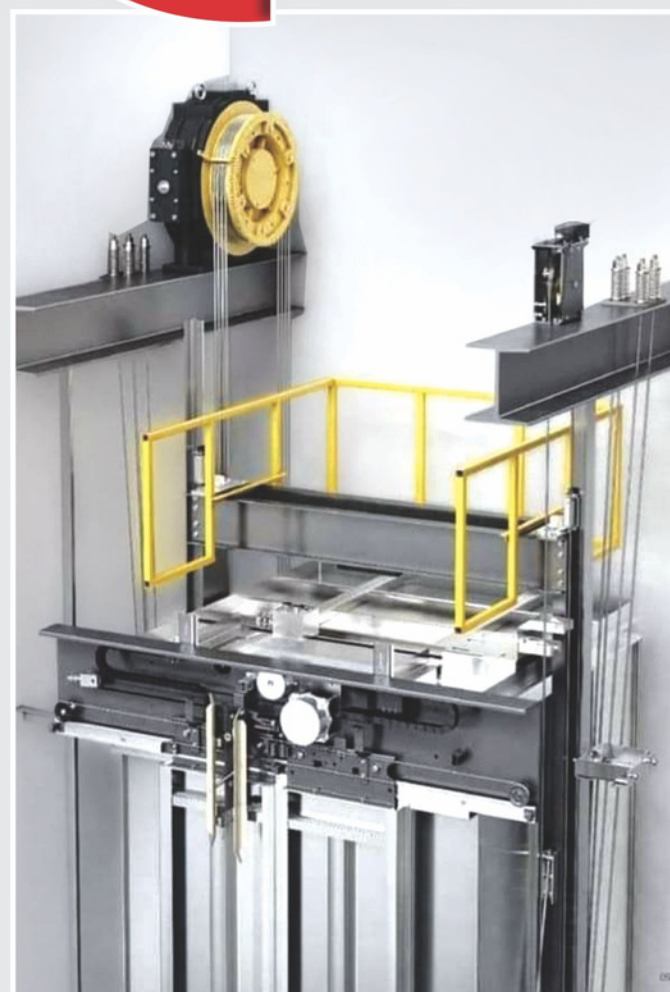

The machine room-less elevators are designed considering the environment concerns by assimilating energy-efficient machines and noise controllers, saving the constructional space design making it environmentally friendly. Comparing it with gear load elevators, these elevators save upto 25% energy and 10% construction space. MRL elevators have overcome the conventional prerequisite of machine room by providing limitless possibilities in creation of elevators having comfort with optimal space utilization.

Available Rated Speed
1.00 / 1.50 / 2 MPS

Max Travel Height

» Hydraulic Elevator For Residential Building

Hydraulic elevator offers a flexible option for bungalows, villas, low rise shopping malls, hotels and multiplex where the installation is needed at a specific position. Hydraulic system are mostly used for the capsule and home elevators where the hoist way location becomes quintessential as counterweight device is not needed, which increases the utilisation rate of the hoist-way and greatly saves the construction space and costs. The elevator also offers wide load carrying capabilities of upto 2 tons.

Goods Elevator For Industrial

A freight elevator is used to carry goods only, though some do both to allow operators and those loading goods along for the ride.

Freight elevators are typically larger and capable of carrying heavier loads than a passenger elevator, generally from 2,300 to 4,500 kg. Freight elevators have manually operated doors and often boast rugged interior finishes to prevent damage while loading and unloading. Although hydraulic freight elevators exist, electric elevators are more energy-efficient for the work of freight lifting.
